# LIGHT-YEARS AHEAD

THE LATEST IN SKINCARE INNOVATION HAS ARRIVED. OMNILUX REVIVE HARNESSES LIGHT THERAPY TO GIVE YOU THE ULTIMATE AGE-COMBATING FACIAL.

**WHERE DID IT START?** Omnilux light source technology was developed over 10 years ago in the United Kingdom. Since then, the non-surgical light therapy technology has been refined to help plump the skin, thereby reducing the appearance of visible signs of ageing of the skin.

**DOES IT WORK?** Managing Director of Doctors Formula, Mandy Gray says, "It uses only the red-light part of the natural light white-light spectrum. It's similar to how photosynthesis works in plants." Gray continues, "It works by complementing the body's own natural ability to refresh the skin, renew moisture and it works to plump the skin naturally."

**WHAT DOES IT INVOLVE?** The initial session (a total of nine is recommended for optimal results) takes about 45 minutes, including the

crucial 20 minutes under the warming light beams which emit the magical pure red light. It is totally painless; just like basking in the sun but without any of the harmful UVA, UVB or infra-red radiation. Combine this treatment with a facial or reflexology massage to get the best results. "Think of it as a deeper massage for the area of the skin that therapists' hands can't reach," says Gray. "It works to plump up skin naturally." This is the perfect skincare treatment for sun-damaged or ageing skin.

**IS THERE ANY DOWN TIME?** "There is no recovery time," says Gray. "Many immediately notice that their skin is clearer, brighter and smoother, and want to try it again as soon as possible." Once you have completed the course, top-up treatments every four to six weeks are ideal for prolonging the results.

## WHERE DO YOU GET IT?

Omnilux is an in-salon treatment. For information on where to go, contact Doctors Formula on 1800 808 993
